COVER CROP CRIMPER

3-POINT

THE ULTIMATE SOLUTION FOR SUSTAINABLE FARMING.

The Crimper is a very useful tool that mechanically compresses cover crops by folding them over, leaving the soil undisturbed. This creates a thick mulch that suppresses weeds along with increasing soil health. The crimper allows for the vegetation to grow again repeating the cycle. The crimper is a beneficial tool for organic and regenerative farms, along with those practicing no till and minimum till. Perfect solution for vineyards and orchards managing cover crops.

COVER CROP CRIMPER
